POWERING SOLUTIONS FOR A BETTER WORLD

Louis Berger provides a wide range of services to plan, engineer and deliver power infrastructure to meet the world's growing need for cleaner, more cost-effective, and more reliable power and energy.

Our experts support energy development, power generation, transmission and distribution projects globally for national and regional governments, and private industry. Working with our clients on both technological innovations and practical application, we provide electricity where there is little, reduce environmental and social impacts, and improve energy efficiency and grid reliability.

Our services span the full project lifecycle—all while adhering to international and local standards for quality, health, safety and the environment.

Specialized Expertise:

- planning, permitting, and compliance
- engineering & design
- engineering, procurement and construction and design/build
- construction management
- operations & maintenance
- capacity building & technical assistance
- asset management
- public-private partnerships
